- white
- green
- violet

Available in a pack of 0.25m or 0.5m

- CAT6 shielded plugs
- Pack of 12 (ideal for patch panels)
- Colour blind friendly

FTP:

FTP is a type of twisted-pair cable used for networking, similar to Unshielded Twisted Pair (UTP) cables. However, FTP cables have an additional layer of foil shielding around the twisted pairs to provide better protection against electromagnetic interference (EMI) and radio-frequency interference (RFI). This shielding helps maintain signal integrity in environments with high levels of interference, making FTP cables suitable for certain networking applications.
